Education

Heritage Institute of Technology

Bachelor of Technology in Electronics and Communications Engineering

CGPA: 8.6 / 10

Oct. 2020 – Jul. 2024

Kolkata, India

Experience

Software Engineer

Jan. 2025 – Present

IBM

Kolkata, India

- Built and shipped Python services on AWS Lambda for an enterprise content-review platform, using Amazon Bedrock and Claude for the AI features.
- Built a RAG chatbot over a domain knowledge base, with a few retrieval strategies and an extended-reasoning mode for harder questions.
- Wrote a validation engine that checks content against requirements with a feedback loop and market-specific lookups, covered it with unit tests, and shipped it through CI/CD (Jenkins, SonarQube, JFrog).

Application Developer, Cloud Full Stack

Feb. 2024 – Dec. 2024

IBM · Apprenticeship

Kolkata, India

- Developed cloud full-stack features across the same serverless platform, building AWS Lambda services and React UI, and working with Amazon S3, DynamoDB and SQS under disciplined Git workflows.

Full Stack Developer

Mar. 2023 – Jan. 2024

TeleMatrix Global · Internship

Kolkata, India

- Built responsive front-end interfaces for client web applications using HTML/CSS, JavaScript and React.
- Developed back-end services and REST APIs with Node.js, Express and Python, collaborating with the team via Git to ship client features.

Projects

Multi-Brand Social Publishing Platform / Next.js 15, TypeScript, Tailwind

2025

- Built a web app that schedules and auto-posts content to LinkedIn, Instagram and Facebook for several brand pages, integrating each platform's API separately so one failed post doesn't block the rest.
- Worked around Meta needing public image URLs by signing short-lived image links with HMAC while keeping the repo private, and built a calendar to plan and drag-reschedule posts, with Telegram alerts on each publish.

Real-Time Multi-Asset Trading Signal Platform / Node.js, WebSocket, DynamoDB, Pine Script

2025

- Built a real-time signal dashboard covering Indian intraday, swing and F&O options plus forex, NASDAQ and crypto, with seven views fed by 8+ custom TradingView (Pine Script v6) indicators over WebSocket.
- Wrote the Node backend to take in alerts through six webhook pipelines, score each asset class, and push live updates to users, storing signal state in DynamoDB with a market-hours lifecycle that freezes signals over weekends.

Trading-Desk Management & Analytics Platform / React, AWS Lambda, DynamoDB

2025

- Built a full-stack platform for a broking desk to manage clients, track equity and F&O trades, monitor risk and view live market data, on React with a serverless AWS backend (Lambda, DynamoDB).
- Wrote an importer that reads broker .xls trade files, drops duplicate fills, matches F&O lot sizes from live data, and works out brokerage, taxes and realized/unrealized P&L per position.

Cloud Telephony Platform (CPaaS) / FreeSWITCH, Node.js, PostgreSQL

2025

- Built a cloud phone platform, a number marketplace plus a FreeSWITCH voice switch running as six Docker services, handling call routing, IVR menus, conferencing, recording and encrypted SIP/RTP.
- Wrote a prepaid billing engine with per-second charging and spend caps (covered by 799K+ test assertions), and led the cleanup and security hardening (encrypted secrets, 2FA, role-based access) after a server breach.

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, C++, SQL, HTML/CSS

Frameworks & Cloud: React, Next.js, Node.js, Express, Tailwind, AWS (Lambda, DynamoDB, S3, SES, Bedrock), Vercel, Serverless Framework, Docker, PostgreSQL, Redis

AI & Practices: LLM integration, RAG, prompt engineering, REST/WebSocket APIs, Git, CI/CD (Jenkins, SonarQube, JFrog)
